

"KEEPING YOUR KIDS HEALTHY" SCHOOL PROGRAM

No segment of our economy faces greater pressure than our education system.

Many students, parents, administration, and faculty have deep concerns about returning to school for in-person classes. Yet, people are eager to return to school if they can be assured that the facility is safe.

In order to provide assurance to the faculty and students that it is safe to conduct in-person classes, administrators must provide and promote the greatest reasonable protection available.

Our "Keeping Your Kids Healthy" School Program is designed for just that.

HOW IT WORKS:

STEP 1: COMPLIMENTARY BASELINE ASSESSMENT

– An analysis tailored to your facility's physical plant. We will provide you with an assessment to identify baseline SQFT determinants for disinfectant products and equipment needed to maintain a healthy environment for your students.

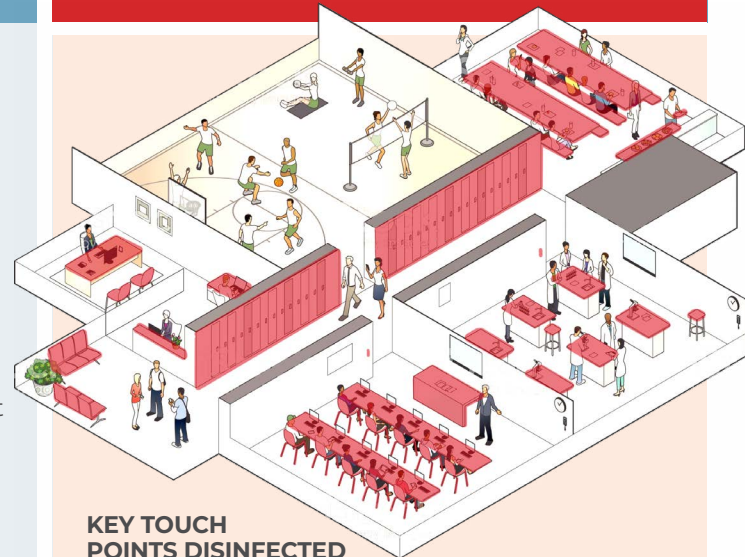

STEP 2: REMOTE AND ON-SITE PROTOCOL CONSULT

– An in-depth analysis of your facility's unique challenges. This includes key high-traffic areas, touch points, joint use furnishings/equipment, and any other disinfectant concerns. We will adjust your facility SQFT determinants to the reality of your custom protocols. This will provide you with a higher level of assurance that you are keeping the student environment healthy and safe. We can then provide exact requirements for Disinfectant Products, Application Equipment, Essential PPE, and Training and Technical Support. Please see the example in the inset.

STEP 3: THE ARTEMIS BIO-SOLUTIONS DIFFERENCE

- Many Threats. One Solution.™
- Comprehensive Solution for all Your Disinfection Requirements
- Custom Disinfectant and Application Protocols
- Approved EPA "N" Listed Products
- Inventory Support - We Carry Bulk Inventory so You Don't Have to
- Equipment and Product Discounts for Annual Commitment
- Ongoing Training and Technical Support
- School District Group Pricing
- Turnkey Program Enhances Your Budgetary Controls
