OXIDIZES FENTANYL, XYLAZINE & HEROIN IN 60 SECONDS

- FRAGRANCE-FREE
- NO RINSE REQUIRED
- NON-FLAMMABLE

READY-TO-USE

PROFESSIONAL GRADE DECONTAMINANT FOR FORCED DEGRADATION OF NARCOTICS

DIRECTIONS FOR USE: For trace (non-visible) amounts of suspected narcotic, apply SoRite DECON directly to non-porous surfaces to be treated with mechanical spray device, hand pump or coarse trigger spray device spraying 6-8 inches from the surface. Treated surfaces must remain visibly wet for at least 60 seconds. Wipe dry with a clean cloth or allow to air dry. Do not spray visible powder directly with any forced spray device, as narcotic powder may become airborne. To decontaminate small amounts of visible powder (up to the size of a pencil eraser), it is advisable to wear nitrile gloves, N-95 mask, and eye protection: (1) carefully place a SoRite DECON towelette or a clean cloth soaked in SoRite DECON over the powder and press down gently (2) spray sufficient SoRite DECON onto and through the towelette or cloth to completely saturate the powder (at least 3 ounces of SoRite DECON for a pencil eraser size of powder) and let sit for at least 60 seconds, then (3) wipe up powder and SoRite DECON with towelette and dispose of towelette & glove in a sealed bag or container. Call trained narcotics remediator if more than a pencil eraser amount is encountered.
